

If you see a patient presenting to the ED with ANY symptoms potentially attributable to

Acute Aortic Syndrome, including:

- **New-onset chest, back or abdominal pain,**
- **Syncope**
- **Symptoms related to malperfusion (e.g. stroke symptoms),**

Think **DAShED** and scan the QR code below to input your patient's information.

## **DAShED study (Diagnosis of Aortic Syndrome in the ED)**

An observational cohort study of people attending the ED with symptoms of Acute Aortic syndrome (AAS)
